SCALE FOR PROJECT MATCHA (/PROJECTS/42CURSUS-MATCHA)

You should evaluate 2 students in this team

Git repository

`git@vogsphere-v2.42belgium.be:vogsphere/intra-uuid-cf2bf87b-17a9-4ef` 

Introduction

Please adhere to the following rules:

- Remain polite, courteous, respectful, and constructive throughout the evaluation process. The well-being of the community depends on it.
 - Work collaboratively with the person (or group) being evaluated to identify any potential issues. Take the time to discuss and debate the problems you have observed.
 - Keep in mind that your peers may have interpreted the project instructions and the scope of its functionalities differently. Always approach the evaluation with an open mind and grade as honestly as possible. Effective learning only happens when peer evaluation is conducted seriously.
- ### Guidelines
- Only evaluate the work present in the student's or group's Git repository.
 - Double-check that the Git repository belongs to the correct student or group. Ensure that the work corresponds to the relevant project and verify that "git clone" is executed in an empty folder.
 - Carefully check that no malicious aliases have been used to mislead you into evaluating content outside the official repository.
 - To prevent any issues, both the evaluator and the evaluated student(s) should review any scripts used to facilitate grading.
 - If the evaluator has not yet completed this particular project, they must read the entire subject before starting the evaluation.
 - Use the available flags on the grading scale to report an empty repository, a non-functioning program, norm violations, cheating, etc. In such cases, the grading process ends immediately, and the final grade is 0 (or -42 in cases of cheating). However, except in cases of cheating, you are encouraged to continue discussing the project, even if it is incomplete, to identify mistakes and prevent them in the future.

Preliminaries

Preliminaries

- All credentials, API keys, environment variables must be stored in a .env file for evaluation. If any credentials or API keys are found outside of this file or within the Git repository, the evaluation will be stopped immediately, and a score of 0 will be given.
- The project allows the use of a micro-framework only. If the student uses a tool that is not on the suggested list, it must be verified that it qualifies as a micro-framework according to the project's definition. As a reminder:
"We consider that a micro-framework includes a router and may have templating, but it must not include an ORM, validators, or a User Account Manager."
If the tool used is not a micro-framework, defense stops.

- If at any point during the defense an unexpected or unhandled front-end error appears in the web console (e.g., uncaught exception, unhandled promise rejection), click the "Crash" button at the bottom of the evaluation scale.
- Any back-end crash resulting in an HTTP error code from 500 to 599 is considered a crash.
- Expected client or server errors returned with proper HTTP status codes (e.g., 400, 401, 403, 404) are acceptable, provided they are handled gracefully and do not expose stack traces or generate unhandled console errors.
- Masking error situations by systematically returning \texttt{200 OK} responses is forbidden and considered incorrect behavior.
- Ensure that the database used is not of the NoSQL type.
- The Git repository must not contain any error tracking libraries such as Raven or Sentry. Additionally, no 500 errors are allowed, and any attempts to conceal them will not be tolerated.

✓ Yes

✗ No

Installation and Seeding

- Reinstall all necessary packages alongside the student being evaluated. Verify that the database contains at least 500 distinct profiles.

If any part of this process leads to a crash, mark the project as incomplete and terminate the evaluation.

✓ Yes

✗ No

Security

The subject insists on this point: "the website must be secure."

At a minimum, verify the following:

- Passwords are encrypted in the database.
- Forms and files uploads have correct validations.
- SQL injection is not possible.

If any of these security measures fail, the defense must be stopped immediately.

✓ Yes

✗ No

Features

Simple Start

- Start the web server to host the website and ensure that no visible errors appear.
- If any errors are present, the evaluation must be stopped immediately, as the application must run without errors.

✓ Yes

✗ No

User account management

- The app must allow users to register by providing at least an email address, a username, a last name, a first name, and a securely protected password. Commonly used dictionary words (regardless of language) should not be accepted as passwords.
- Once logged in, users must be able to complete an extended profile and update both their profile information and their registration details at any time.
- When signing up, users will receive a confirmation email containing a clickable link. The account should only become usable after clicking the link.

✓ Yes

✗ No

User Connexion

- The user must be able to log in with their username and password. Additionally, there should be an option to reset the password via email if forgotten.
- Logging out must be possible from any page on the site with a single click.

✓ Yes

✗ No

Extended Profile

- The user must provide the following information:
 - Their gender

- Their sexual orientation
 - A short bio
 - A list of interests (using hashtags like #bio, #NoMakeup, etc.)
 - Up to 5 images, including a profile picture.
- If the seeding process is correctly implemented, the user should receive tag suggestions in some form, such as autocomplete or top-trending tags.
- Once the profile is complete, the user should be able to access the website. Additionally, they must be able to update their profile information at any time while logged in.
- If any of these requirements are not met, this evaluation criterion is considered failed.

☒ Yes☐ No

Consultations

- The user must be able to view a history of profile visits and a list of people who have liked their profile.
- Verify that when a user views another user's profile, it is properly recorded in the visit history.

☒ Yes☐ No

Profile Suggestions

- When logging in, the user should easily receive a list of suggested profiles that match their preferences.
- Suggested profiles must align with the user's specified sexual orientation. If no orientation is provided, the user should be considered bisexual by default.
- Verify with the student that profile suggestions are weighted based on the following three criteria:
 - Proximity to the user's geographic location.
 - Maximum number of shared interest tags.
 - Highest fame rating.
- Ask the student to explain their strategy for generating a relevant list of profile suggestions.

☒ Yes☐ No

Research

The user must be able to perform an advanced search by selecting one or a multiples criteria, such as:

- A specific age range.
- A fame rating range.
- A location.
- One or multiple interest tags.

☒ Yes☐ No

Sort and Filters

Both the suggestion list and the search results must be sortable and filterable by:

- Age.
- Location.
- Fame rating.
- Tags.

☒ Yes☐ No

Geolocation

- The user must be located using GPS positioning down to their neighborhood, with their explicit consent.
- If the user opts out of GPS location tracking, they must manually provide their approximate location (city or neighborhood) to use the matching features. This manual location entry is required for the application to function properly.
- The user must have the option to modify their location within their profile at any time.

☒ Yes☐ No

Fame Rating

- Each user must have a publicly visible fame rating. Ask the student to explain their strategy for calculating this score. The method must be consistent and, at a minimum, relevant.

☒ Yes☐ No

Notifications

- A user must receive real-time notifications (with a maximum delay of 10 seconds) for the following events:
 - They receive a "like".
 - Someone visits their profile.
 - They receive a message.
 - A user they "liked" also "likes" them back.
 - A connected user "unlikes" them.
- The user must be able to see, from any page, when they have unread notifications.

☒ Yes☐ No

Profile of Other Users

- A user must be able to view other users' profiles, which should display all available information except for the email address and password.
- The profile must also show:
 - The user's fame rating.
 - Whether the user is currently online.
 - If the user is offline, the profile should display the date and time of their last connection.
- Verify that profile views are recorded in the visit history.

☒ Yes☐ No

Connection Between Users

- A user can like or unlike another user's profile picture.
When two users mutually like each other, they will be considered connected and will gain access to the chat feature.
- A user without a profile picture cannot like another user.
- When viewing another user's profile, it must clearly indicate whether they are connected with the current user or if they have liked the current user.

☒ Yes☐ No

Reporting and Blocking

- Users must be able to report a profile as a fake account.
- Users must be able to block specific users.
- A blocked user must no longer appear in search results or profile suggestions and must not generate any further notifications.
- Chat functionality between the blocking user and the blocked user must be disabled.

☒ Yes☐ No

Chat

- When two users are connected, they must be able to chat in real time (with a maximum delay of 10 seconds).
- Users must be able to see if they have received a new message from any page of the website.

☒ Yes☐ No

Good practice

Compatibility

- The website must be compatible with the latest versions of Firefox and Chrome.

☒ Yes☐ No

Mobile

- Is the website fully usable on mobile devices and screens with very small resolutions?

☒ Yes☐ No

Bonus

Additional Bonus

- Up to five additional bonus points can be awarded.
- The usefulness and relevance of the bonus features are left to the evaluator's judgment.
- Refer to the Bonus section of the project for examples of eligible enhancements.

Rate it from 0 (failed) through 5 (excellent)
